---

Yes, you can, as long as they match the following requirements:

OS: Linux; php 4.0 + and php 5+; MySQL 4+ and 5 (for servers: intense, ss5, ss6; rs15, rs16 and rs17) and in case this software/script is not designed for streaming audio/video broadcasting.

Anyway, if you are hesitating about whether your software can be installed or not, feel free to come to our live chat support and consult us.

We are always glad to help you.
