---

Its always been a challenge for linux hosts to support frontpage. This is because the most recent version of FrontPage Server Extensions for Linux was developed in 2002. Microsoft refuses to support Linux with newer extensions.

You could try uninstalling, then reinstalling extensions inside your cpanel or simply use the file manager or FTP which is much better.

If you are using FrontPage 2003 or newer, you will need to disable SharePoint services in FrontPage.
